

Software Engineer - Avolites Ltd

About us:

Avolites Ltd is a small company based in west London that designs and manufactures lighting control products for the entertainment industry.

Avolites lighting desks and dimmers have a strong reputation for ease of use and reliability and are in use daily on thousands of shows worldwide. Avolites equipment has recently been used by acts such as U2, Duffy, Il Divo, Scouting for Girls and The Wombats and there was an Avolites console on every stage at this year's Glastonbury festival.

Avolites recently released the Titan software platform for our existing Pearl Expert console and a new Touch Screen console. Avolites is seeking an experienced software developer to join the London based development team and help deliver an ambitious development program for the Titan platform, helping to maintain the company's competitive advantage and drive forward into new markets.

Essential skills and experience:

The successful applicant will have excellent knowledge of objected orientated design and development in C++, C# or a related language. They will be familiar with software development life cycles and be able to drive specification, design, development, testing and delivery of software products. They will be able to learn quickly and have an understanding of techniques for maintenance, refactoring and development of an established code base. They will have excellent communication skills and be able to work as part of a team, discussing and developing ideas with peers, guiding junior staff and presenting findings and progress to management.

Applicants should have a good degree in computer science, engineering, mathematics or a related discipline. Experience in the lighting industry would be an asset but is not essential. Experience of technologies such as .net, WPF, WCF, Windows Embedded, Visual Studio and Team Foundation are desirable but not essential.
